MindVault Configuration Reference: Infrastructure Environment Directives
Document Identifier: MV-DOC-05 | Version: 2.1 | Classification: Systems Architecture
==========

Section 1: Database and Pool Connection Bounds
DB_POOL_MAX=20 # Maximum concurrent connections per API gateway instance
DB_TIMEOUT_MS=5000 # Database query execution timeout in milliseconds
WORKER_CONCURRENCY=5 # Concurrent background jobs processed per worker node

Section 2: Document Payload Boundaries and Extractor Handling
MAX_FILE_SIZE_BYTES=26214400 # 25 Megabytes absolute payload boundary
Extractor error marks document FAILED with errorMessage in PostgreSQL documents table.

Section 3: Knowledge Graph Traversal Timeouts and Loop Guards
GRAPH_TIMEOUT_MS=2500 and visited set evaluation prevent cyclic loops during multi-hop path traversal.
Multi-hop queries abort after 2500ms to preserve generation response budgets.

Section 4: Retrieval Channel Weights and Thresholds
SIMILARITY_FLOOR=0.65 # Minimum cosine similarity required for vector chunk survival
FTS_WEIGHT=1.0 # Multiplier weight for PostgreSQL full-text search channel
